Advanced Phonebook Crack + PC/Windows [Latest] 2022

The main purpose of this program is to make contact management simple and efficient. It includes a handy phone book with basic information for all contacts, along with email and Skype contacts, as well as a free social network with unlimited users, updates and content. There's a powerful contact manager for organizing your contacts into business (customers, employees, partners, sponsors, suppliers) and personal (family, friends, neighbors, relatives) categories, with unlimited subcategories. You can also create favorites contacts and sort them by various fields. A useful search option will help you find and import contacts starting with a number, letter or symbol. You can search contacts by full name, address, title, company, city, state, ZIP code, comment, social network, contact's phone, fax, email, Skype, or any similar details. Advanced Phonebook reports give you access to contacts by category, full name, company, phone, fax, email and other details. You can generate a report by one or all contacts starting with numbers, letters or each alphabet letter. Advanced Phonebook is a comprehensive application that lets you put together an address book with contacts information. It has rich features and intuitive configuration settings which cater to all types of users looking to better organize data. The best thing about this software is that it can solve so many simple problems you had before, and still has a lot of features to help you with complex problems. The flaws that I noticed: 1. Some of the default categories are way too broad. For example, the first category is "Education" and it has sub-categories like "School", "High School", "Junior College", "College", etc. There's no reason for me to place a contact in these categories as I don't have a child or a student of any of these. 2. The categories should have a more intuitive name to indicate what they are for. 3. The default categories need more refinement, or if they can't be changed, then let us at least be able to create more categories of our own. 4. The list of contacts doesn't have a search function. 5. The filter function in the contact list doesn't work very well. Only two columns can be filtered by default. For example, if I would like to filter the contact list by only "Customer" and "Employee" categories, only then will only those contacts be displayed, but if I try to filter by other categories such as "Supplier", it won't give any results. 6. A lot of information should be displayed on the contact list and on the contact details. For example, when I want to find a particular contact, I can't just search for a contact by the first name or a nickname. I would also like to know the company he/she works for, when he/she was born, etc. 7. The contact list doesn't always show the last change date. If the contact list is sorted by last change date, then only the most recent changes will be displayed. 8. The contact list is inconsistent in displaying contact details. If the contact is associated with a project, then the project name will be displayed in the detail pane. If the contact is not associated with a project, then nothing is displayed. 9. The "Show/Hide" option doesn't work for any of the entries. The only things that is visible is the default category. If I want to view any other category, then the option "
