If you've used Adobe Versions 4, 5, or 6, you'll know that my Lightroom 5 review was a long time coming. The new interface of Adobe Photoshop CC 2014 has been in the works for a long time, and there are several changes. For one, I think the latest version of Photoshop, overall, looks much better than older versions, and imparts a pretty "modern" vibe. The interface is clean, with blue hues and loads of contrast. I have not noticed any visual clutter or problems that have bothered me in previous versions. Buttons, sliders, and controls are bigger, which made them easier to tap while fiddling around with sliders, which can help when working with extremely large and/or detailed images. On the other hand, I do miss the leopard skin look, just the way it was in CS2. Hopefully Adobe can still give us that in a future upgrade. One of the first things I usually notice when reviewing a new version of Photoshop is that the UI has changed. Gone are the days when Photoshop felt like "The World" - it now feels less like a single program and more like several, which can be a bit disconcerting to old timers. Adobe has addressed the Unity-ease of dealing with assets in a new tool dubbed Reveal. From here on users can audition and install true media to their canvas, just like an app, and can easily assign different background color fills and live previews (color, rotate, etc.) to any product. Once this is done, the media files can be shared with a link. Reveal can apply these effects consistently across a whole set of assets ( MacRumors ) to produce uniform backgrounds or even animation effects all at once.
