Password Revealer is a small tool that allows you to reveal saved password in web browsers (Internet Explorer, Firefox, Chrome, Opera) and Microsoft Windows operating systems. Once installed, the tool goes into stealth mode and stays on the screen at all times. It can't be closed by hitting the X button and it doesn't react to mouse clicks and keyboard commands. The only way to terminate the program is to manually press the Ctrl + Alt + Del keys combination. When you enter the main window, you will notice an entry field that will require your search pattern. To get to the password under the asterisks, enter the specific URL of a web site you want to retrieve the passcodes from. The password of the website you have selected will be revealed in a small window. To view the details of the selected website, you can click on a small down arrow in the right corner. This will open a new browser window. If the URL of the website is listed on the Web address bar, you can use the back button to go back to the main window and continue with the search process.
