There are many ways to tweak exposure and lighting in Photoshop, but maybe tweaking each of the individual channels is just getting too complicated. Fortunately, we can apply adjustments to the entire image, or even to specific areas, by using Tunnel Blending Correction. This simply means making a selection around the area that we want to adjust (say, increasing the exposure of the sky), then using the same tools to adjust the selection, without changing the layer order (which makes it easier to get back to the original state). Metadata such as exposure, image size, scan resolution and print exposure are gathered automatically in Photoshop. It's a great feature for those who shoot a lot of images or who have a lot of "throw-away" images. Want to add an instant star to a really dull image? We've all been there. Selecting and moving objects is one of the most common image editing processes. Unfortunately, Photoshop has been using only Photoshop's native object selection options for some time now - meaning that our selection tools can usually be a little convoluted when in need of a quick, reliable mark. However, the new Quick Selection tool (F3) gives us a selection tool that is easy to use, quick and reliable.
